

the Archidoxes of Magic

of Aristocles

Before there was many, there was three

Before there was three, there was two

Before there was two, there was one

Before there was one, there was nothing

Before there was nothing, there was Recursion

Whether there is anything or whether there is nothing
there is Recursion

Recursion is Necessary, Generative, Self-defining and Unique

Necessary because it is not optional, it is not arbitrary

It is not a thing, action, relationship, abstract or concept
requiring anything other than itself to define itself

It is not an unmoved mover, immanence or deity

It is independent of any sort of observer or self-observer effect

it is independent of time and space

Generative because it is a tautology without being trivial

Self-defining because it defines everything

but is not defined by anything else

Unique because it is the only possible starting point

that defines everything that could be

as well as everything that couldn't be

Everything that is similar to it in any way, is it
