

Evolution goes up then right, Apparent Causality goes right then up.
 Apparent Causality is thus the specific absence of Evolution and is the way things act and react and interact within the evolutionary cycle. It is what drives Evolution.

This is Input - Modification - Output.

When 2 Purple and 5 Red are simultaneous they are Input. The Purple emptiness is possibility and allows the Red action to be effective. That produces simultaneous balance of 3 Orange internal conditions and 6 Blue external influences to be resolved, which is Modification. The result is a new situation of 4 Green internal changes and 7 Yellow external changes which is Output.

Evolution

Apparent Causality
